Engineered with the contractor in mind

Midwest Perma-Column introduces our **BEST** Products laminated column line. Our column is built strong — glued, nailed, and upon request, supported by our indestructible Perma-Column footings option. Now, **BEST** Products utilizes a specially designed spacer, engineered to open the column notch in order to accommodate a truss and gusset plate. This simple innovation eliminates prying the notch open to insert the truss, allowing easier adjustments and installation.

- **Saves you labor**
- **Easy adjustments**
- **Faster assembly**
- **Greater accuracy**
